Contribution to Science:

1. Creating an oncolytic virotherapy program. For a period of 18 years, I led the preclinical and basic researches related to Oncolytic Virotherapy at Iraqi Center for Cancer and Medical Genetic Research, Mustansiriyah University. In 2012, we granted patents Ref. No: 3700 for Iraqi Newcastle Disease virus strain as cancer therapy. The viro-genetherapy program has been developed using Newcastle Disease virus, measles virus and good in vitro and in vivo results has been obtained that is encouraging for clinical application.

2. Developing cancer Immuno-virotherapies, TNF-a, IFNg and IL-18 genes cloning and inserting in recombinant oncolytic Measles virus in collaboration with Dr. Stephen J Russel Lab at mayo clinic and rescuing several new viruses for cancer treatment and the work progressing. Creating - Photosensitizing oncolytic measles

virus for photodynamic therapy. The project is to generate a recombinant measles virus for photodynamic therapy where the virus will express ALA synthase for cancer treatment.

3. Special interest in establishing new tumor models from Iraqi patients, and new tumor animal models, in 2003 Established transplantable tumor cell line in immunocompetence mice / which is in use for research in Iraq, more than 70 PhD students, MSc student and researchers used this line in their research. In 2003 Establishing a new tumor cell line (Mouse mammary adenocarcinoma) which named AMN3 (Ahmed Mohammed Nahi). In 2006 establishing first Iraqi human tumor cell line (Glioblastoma cell line), which now in use for cancer research in ICCMGR and many researchers 50+ used this cell line as a human cancer cell model. Also, in 2006 embryonated cell line from rats, which used extensively at ICCMGR for toxicity studies by hundreds of research. In 2013 establishing first breast cancer cell line from Iraqi patients and the cell line AMJ13 published. In 2002 – present the supervisor of cell bank at Iraqi Center for Cancer and Medical Genetic Research, Mustansiriyah University which include many cell lines and provide services to researchers for cancer research.
