MAIN EREA OF RESEARCH AND SCHOLARLY INTERESTS

1. My present interest in research is directed in one on the synthesis and characterization of liquid crystalline models and polymers, containing mesogenic, non-mesogenic, heterocyclic units. IR, HNMR, Mass spectroscopy, differential scanning calorimetry (DSC), hot-stage polarizing microscopy usually used for characterize these materials.
2. My research is also directed on the study of antimicrobial activity of organic compounds containing heterocyclic units like oxadiazole , thiadiazole , triazole , oxazole and others.
