Comparison Between Google Slides And Microsoft Power Points

Google Slides vs PowerPoint

Handling of PowerPoint Files

First off, Google Slides is unfortunately still the broken web app which used to mess up PowerPoint presentations which were uploaded to it. In Fact, not much has changed. When it comes to PowerPoint Online Vs Google Slides for handling PowerPoint files, Microsoft takes the cake. Below is a comparison of a PowerPoint file uploaded to PowerPoint Online and Google Slides and the difference is evident.

Creating & Editing Presentations in Google Slides and PowerPoint Online

The options for making presentations online are pretty much similar, where preferring PowerPoint Online or Google Slides might be a mere matter of preference and habit. Nonetheless, PowerPoint Online provides features that are similar to the native PowerPoint desktop app, which many users might find quite convenient. Despite the fact that the features offered in PowerPoint Online provide only basic Ribbon Menu options. So in terms of editing options and the utility to create new presentations, there seems to be a tie

Which is Better at Presenting Presentations from a Browser?

The answer to this question is simple, Google's presentation mode for Google Slides is much better than what Microsoft has to offer.

Google Slides is in the cloud which enables sharing and collaboration easier.

Since Slides is in the cloud, there is no need to store/backup any files. Everything is automatically saved in the cloud.

MS PowerPoint is a matured product. It has got lot of features (more animations, templates, charting options etc).

Creating a presentation in PowerPoint is way easier with the help of thousands of templates available in web.

Performance wise, PowerPoint is better. Presentation is very smooth. Since Google Slides runs in the browser, sometimes its glitch.

Both the platforms have their own set of web/mobile apps.

PowerPoint Online is little feature less compared to its rival Google Slides.
