## Plotting Commands

MATLAB provides numerous commands for plotting graphs. The following table shows some of the commonly used commands for plotting:

| Command | Purpose |
| :--- | :--- |
| axis | Sets axis limits. |
| fplot | Intelligent plotting of functions. |
| grid | Displays gridlines. |
| plot | Prints plot or saves plot to a file. |
| print | Puts text at plop of plot. |
| title | Adds text label to $x$-axis. |
| xlabel | Adds text label to $y$-axis. |
| ylabel | Creates axes objects. |
| axes |  |

| close | Closes the current plot. |
| :---: | :---: |
| close all | Closes all plots. |
| figure | Opens a new figure window. |
| gtext | Enables label placement by mouse. |
| hold | Freezes current plot. |
| legend | Legend placement by mouse. |
| refresh | Redraws current figure window. |
| set | Specifies properties of objects such as axes. |
| subplot | Creates plots in sub windows. |
| text | Places string in figure. |
| bar | Creates bar chart. |
| loglog | Creates log-log plot. |
| polar | Creates polar plot. |
| semilogx | Creates semi log plot. (logarithmic abscissa). |
| semilogy | Creates semi log plot. (logarithmic ordinate). |
| stairs | Creates stairs plot. |
| stem | Creates stem plot. |

The simplest form is:

## Example:

| $\gg$ | $x=\left[\begin{array}{llllllll}1 & 2 & 3 & 5 & 7 & 7.5 & 8 & 10\end{array}\right] ;$ |
| ---: | :--- |
| $\gg y=\left[\begin{array}{llllllll}2 & 6.5 & 7 & 7 & 5.5 & 4 & 6 & 8\end{array}\right] ;$ |  |
| $\gg$ | $p l o t(x, y)$ |

| Line Style | Specifier |
| :--- | :---: |
| solid (default) | - |
| dashed | -- |

| Line Style | Specifier |
| :--- | :---: |
| dotted | $:$ |
| dash-dot | - |

| Line Color | Specifier |
| :--- | :---: |
| red | r |
| green | g |
| blue | b |
| cyan | c |

| Line Color | Specifier |
| :--- | :---: |
| magenta | m |
| yellow | Y |
| black | k |
| white | W |

| Marker Type | Specifier | Marker Type | Specifier |  |
| :--- | :---: | :--- | :--- | :---: |
| plus sign | + |  | square | S |
| circle | $\circ$ |  | diamond | d |
| asterisk | $\star$ |  | five-pointed star | p |
| point | $\cdot$ |  | six-pointed star | h |
| cross | x |  | triangle (pointed left) | $<$ |
| triangle (pointed up) | $\wedge$ |  | triangle (pointed right) | $>$ |
| triangle (pointed down) | V |  |  |  |

Some examples:
plot (x,y)
A blue solid line connects the points with no markers (default).
plot ( $x, y, ~ ' r ') \quad$ A red solid line connects the points.
$p l o t\left(x, y,{ }^{\prime}--y^{\prime}\right)$ A yellow dashed line connects the points.
plot (x,y, '*') The points are marked with * (no line between the points).
plot ( $x, y,{ }^{\prime} g: d^{\prime}$ ) A green dotted line connects the points that are marked with diamond markers.

Example:

```
>> yr=[1988:1:1994];
>> sle=[8 12 20 22 18 24 27];
>> plot(yr,sle,'--r*','linewidth',2,'markersize',12)
```

```
dashed red line and asterisk marker.
```

Property Name and Property Value: the line width is 2 points and the marker size is 12 points.
